LAWN VIEW OF PRIVATE ESTATE SOWN WITH BURNETT'S "SPECIAL" LAWN GRASS SEED MIXTURE

BURNETT'S LAWN GRASS SEED MIXTURES

The Satisfaction of a Perfect Lawn

A fine lawn is obtained by the careful and exact fulfillment of three fundamental requirements. Preparation of the seed bed, the use of good grass seed and the proper maintenance of the turf once established. These three factors are of equal importance, and failure to meet the requirements of any of these will make the efforts expended on the other two of little avail. **Burnett Bros. Inc.**, with a reputation of supplying grass seeds of the highest quality for a period of over thirty years, assume the responsibility of furnishing good seed.

Quantity to Use

For all general purposes, 1 lb. will sow 150 to 200 sq. ft.; 150 to 200 lbs. per acre. Use one-half these quantities when renovating an old lawn.

BURNETT'S "KILLARNEY" MIXTURE

Burnett's Lawn Grass Seed Mixture "Killarney" is composed of a combination of the finest imported and domestic grasses, the highest grades possible to procure, and specially adapted for this climate. This mixture is composed of all solid, re-cleaned seeds of the highest germination. Therefore, owners of large estates requiring a permanent sod and everlasting lawn should by all means use this high-grade mixture. If the ground is properly prepared, we are certain "**Killarney Mixture**" will produce a turf of velvet, equal to the most famous lawns in Europe.

BURNETT'S "SPECIAL" LAWN GRASS MIXTURE

The above mixture is made from our own formula, and composed of grasses specially adapted for the purposes of producing turf which retains its rich green color and velvety appearance throughout the entire summer and fall. In making up this high grade mixture we are careful to use only the very finest quality of all the most desirable, dwarf evergreen, **re-cleaned** grasses, free from chaff and weeds, which thrive well on any soil, thus ensuring a beautiful and permanent lawn.

View showing Lawn sown with BURNETT'S "SHADY PLACE" Lawn Grass Seed Mixture

BURNETT'S "SHADY PLACE" MIXTURE

When a lawn is much shaded, either in whole or in part, the shaded portions should be sown with Burnett's "Shady Place" Lawn Grass Mixture, which is a combination of fine, dwarf-growing evergreen varieties, which, in their wild or natural state, are to be found growing in the woods or other sheltered or shady places. Under or in the immediate neighborhood of large trees fertilizers should be applied liberally and frequently, for the trees absorb the fertilizer and impoverish the ground. Ground much shaded is very frequently sour, and if

the drainage is defective it is apt to be covered with moss. In such cases an application of lime or wood ashes raked in will sweeten the soil, but the moss should be first removed with a sharp steel-toothed rake. Lb. 75c., 5 lbs. \$3.50, 12½ lbs. \$8.25, 25 lbs. \$15.75, 100 lbs. \$58.00

JAPANESE BEETLE

The most serious lawn insect pest in recent years. The grubs feed on the roots of the grass during May and June and again in August and September. The serious increase of this pest threatens the very existence of our gardens and lawns. Earnest cooperation of all within the infested area in fighting the Japanese Beetle is the only solution to the control of this menace. Grub proofing of lawn areas with Arsenate of Lead kills the grubs and safeguards the lawn from damage.

Rate of Application—1 lb. to each 100 sq. ft. Apply either in early Spring or late Summer. Rake in thoroughly. See page 69 for prices.

HAIRY CHINCH BUG

The most logical control of this and other lawn pests is through the establishment of various individual grasses which are less susceptible to insect injury. We highly recommend our new "Permanent Turf" Formula for this purpose. (See above).

Experimental work has shown the most effective chemical control to be either pure Tobacco Dust or Rotenone Dust, applied at the rate of 2 to 4 lbs. per 100 sq. ft. Application should be made during the hottest part of the day and the material thoroughly brushed in. There are two broods, application for the first should be made in early June and in early August for the second. (See page 70)

HAIRY CHINCH BUGS

PERMANENT TURF

The House Famous for Lawn Grass Seed's "NEW LAWN FORMULA" Prepared Especially for Chinch Bug Infested Areas

Many beautiful lawns throughout certain areas of the eastern coast of the United States and elsewhere have been completely destroyed as a result of the extensive ravages of a recent lawn pest, the Chinch Bug. This bug is of the sucking insect type and does its damage to lawns by piercing the grass blades and shoots near the soil level and sucking out the juices of the grass.

Certain grasses have been found to be highly resistant to the attacks of this insect and it is a careful blending of these grasses that make up our "Permanent Turf."

Permanent Turf (no Clover). 12½ lbs. \$12.00, 25 lbs. \$22.00, 100 lbs. \$78.00, 500 lbs. \$350.00.

Permanent Turf (with White Dutch Clover). 12½ lbs. \$12.50, 25 lbs. \$22.50, 100 lbs. \$80.00, 500 lbs. \$360.00.

Permanent Turf (with Kentish Wild White Clover). 12½ lbs. \$13.00, 25 lbs. \$24.00, 100 lbs. \$85.00, 500 lbs. \$380.00.

SEASHORE FORMULA

This mixture is composed of grasses most suitable for areas near the ocean. Will give good results in any sandy soils. Deep rooting grasses that are not injured by salt water.

Seashore. Lb. 65c., 5 lbs. \$3.00, 12½ lbs. \$7.25, 25 lbs. \$13.50, 100 lbs. \$50.00.

BURNETT'S "BANK AND TERRACE" MIXTURE

On sloping banks it is often necessary to use sod, as heavy rains wash the soil off before the grass seed has time to germinate. It is sometimes even necessary, in sodding very steep banks, to use pins 8 or 10 inches in length to pin the sods in place, to prevent them from being washed down by excessive rains before the grass roots have had time to fasten in the soil. The Terrace mixture which we offer is composed of deep-rooting grasses which, if once established, will hold the soil and prevent washing. We advise liberal fertilization and seeding so that the grasses may be quickly established.

Lb. 80c., 5 lbs. \$3.85, 12½ lbs. \$9.25, 25 lbs. \$17.50, 100 lbs. \$65.00

CLOVERS

KENTISH WILD WHITE CLOVER

Through extensive experimental work this strain of White Clover has shown great promise for lawn and pasture use. Its successful growth in areas that are heavily infested with Hairy Chinch Bugs, Japanese or Asiatic Beetle Grubs, will undoubtedly be one of its most important features. A plant of vigorous growth and aggressive habit, it will produce a green sward where nothing else succeeds. It is a small-leaved sort of very prostrate nature. The root system is extremely extensive, forming roots at the joints of all the procumbent stems in addition to the main tap root system. The dense creeping habit of this Clover makes it unexcelled as a control for soil-erosion as well as an exceptionally nutritious pasture plant.

Lb. \$2.50 5 lbs. \$11.25 10 lbs. \$20.00 25 lbs. \$45.00

NOVELTIES IN FLOWER SEEDS

1938

ALL-AMERICA SELECTIONS

1938

All gardening enthusiasts are more or less interested in something new in the floral world, and for this reason we keep in touch with all new introductions as they appear from year to year. These novelties and specialties have been selected by us as having a good claim to merit and are well worthy of a trial.

Each year a group of horticultural experts makes a careful study of new floral novelties produced by plant breeders from all over the world. The final decision of this committee on each year's novelties is known as the **All-America Selections** for that year. The following list, arranged in order of merit, is the selection of the newest in flowers for 1938.

PETUNIA, "SALMON SUPREME"

Hybrida nana or dwarf bedding variety of a distinct new light-salmon color. Flowers are $1\frac{1}{2}$ in. across with white throat and plain petals. Plants grow about 12 in. high. Ideal Petunias for borders, edgings or beds. Pkt. 35c.

ANTIRRHINUM, "CELESTIAL"

(Majestic Type)

Large, salmon-rose flowers on broad, compact, 10 in. spikes which is grand for this dwarf type. Pkt. 50c.

PANSY, "CORONATION GOLD"

Acclaimed the largest yellow variety, comparable with Roggli's Swiss Giants. Canary yellow with lower petals flushed golden orange; round flowers with lightly ruffled edges. Excellent. Pkt. \$1.00.

CALLIOPSIS DRUMMONDI

"GOLD CREST"

A rich, golden yellow color with a reddish brown zone. A big improvement over the old Golden Wave. Flowers $2\frac{1}{2}$ to 3 in. across and come with a double row of mammoth petals. Very attractive and excellent cut flower. Pkt. 25c.

CALENDULA, "ORANGE FANTASY"

(Crested)

Outer petals long, the inner petals short, curled and interlaced to form a heavy crest which surrounds a large mahogany bronze center. Flowers $3\frac{1}{4}$ in. across, and are of a deep but pleasing coppery-orange with petals edged deep mahogany red. 15 in. tall. Pkt. 25c.

PETUNIA, "GAIETY"

(All-double Giant Dwarf)

All-double fringed Victorious or dwarf type of Petunia. Rose or light rose red and white colorings. Flowers $3\frac{1}{2}$ in. across and quite double. Later flowers, mostly semi-double, rose-red and white with frilled petals. Pkt. \$1.00.

PETUNIA, "ORCHID BEAUTY"

Dwarf, "All-double" Giant Fringed Variety

Flowers averaging 4 in. across on sturdy plants a foot high. Color orchid or light lilac. Excellent as pot plants or bedding. Pkt. \$1.50.

PETUNIA HYBRIDA, "TOPAZ ROSE"

A brilliant addition to the Hybrida group. The color is a fiery, velvety-rose, of a brilliancy seldom seen. It is slightly suffused with gold, which gives it its fiery appearance and the throat is the color of topaz. Pkt. 50c.

MARIGOLD, "GOLDEN WEST"

New Carnation-flowered Marigold. Flowers are fully double, bright rich-orange, $3\frac{1}{2}$ in. and more across with petals loosely and gracefully placed. Plants grow about $2\frac{1}{2}$ ft. tall with long stems. Blooms in about 15 weeks from seed. Pkt. 25c.

NAVAJO ZINNIAS

Medium size, double and semi-double, long, narrow, incurved or fluted petals. Outer one-third of each petals is heavily tipped with a lighter contrasting color. Pkt. 25c.

ASTER, IMPROVED CREGO "ENCHANTRESS"

(Wilt-resistant)

A luscious shade of lively salmon-rose, distinct from all other colors yet developed. The flowers are large, of good substance and are produced on free-flowering, branching plants. Pkt. 50c.

ASTER, GIANT COMET, "ILLUSION"

(Wilt-resistant)

Soft pastel shade of apricot-pink, especially fine for cutting and most effective when used in combination with some blue flower. The plants are upright, about 2 ft. tall, and begin to bloom mid-August. Pkt. 50c.

FIELD OF RUSSELL LUPINES

SENSATIONAL FLORAL GEM FOR 1938

RUSSELL LUPINES

(*Lupinus Polyphyllus*)

These remarkable Lupines are the result of the continuous labor for many years of the enthusiastic grower whose name they bear.

The chief features of this wonderful strain are: First, the giant size of the spikes of bloom which are often 3½ ft. and more in length; second, the fan-like shape of the large individual flowers, the standard being expanded like that of a Sweet Pea; and third, and most distinctive, the enormous range and unique character of their coloring. Many are self colors, quite new in Lupines; pure yellows, oranges, and rich, bright crimsons. There are also an immense number of most attractive bicolors, the whole in mixture displaying a kaleidoscopic variety of tints comprising all the colors of the rainbow and producing an immediate effect. A gold medal was awarded to the Russell Lupines at the Royal Horticultural Society (London, England) meeting on June 8, 1937.

BURNETT'S BEAUTIFUL ASTERS

The introduction of a Wilt-resistant strain of Asters of recent years has helped tremendously in restoring this beautiful flower to popular favor as a garden plant. Up until the time of the origination of this resistant strain, garden enthusiasts were becoming discouraged trying to grow Asters outdoors with the wilt-disease so prevalent. The appearance of this new strain has again awakened interest in the culture of Asters.

For best results the ground cannot be too richly prepared. Plants from seed sown in the open ground in May will bloom in September and October. For July and August flowers, sow in March or April in cold frames or hotbeds. We especially recommend the following as being the best for cutting and general garden use.

Culture—To make a permanent Asparagus bed, the ground should be trenched deeply and well drained. The trench should be filled up with a rich compost of well-rotted manure and loam. Set roots 12 inches apart in the rows, allowing 2 to 3 feet between rows, spreading out and separating the roots carefully so that the crown will be covered with about 6 inches of soil. In November, when the stalks have been cleared away, give the bed a good top-dressing. In early Spring a liberal application of agricultural salt will be beneficial.

GLADIOLUS FOR LATE PLANTING

We ask our patrons who desire bulbs for September and October blooming to order them in April. This will enable us to put them in cold storage to keep them in a dormant state, until time for planting around July 1st.

We Sell Two Types of *Lilium Philippinense Formosanum*

HARDY GARDEN LILIES

The various types of Hardy Lilies are unequaled by any other plant in their unique combination of beauty, gracefulness, and stately magnificence; yet they are entirely unknown in many gardens. Their culture has been entirely too much neglected, but each year as their merits become better known, they increase in popularity. In cold climates the bulbs should be protected from freezing during the Winter by a heavy covering of leaves, hay, or straw.

These picturesque trees, grown for us by a specialist in this line, will lend a note of distinction to your home and grounds. Adaptable to many situations, they can be trained on walls or trellises for screens, and are also used for bordering garden walks. Already trained when purchased, a careful pruning twice a year keeps the trees growing in the proper shape. These fruit trees are fascinating from the time the first pink flower-buds appear in the Spring until the fruit is harvested in the Fall.
